

Approved Untreated Planting Stock Sources

Vermont Organic Farmers, LLC.

January 2019

Producers of organic crops are required to source certified organic seed and planting stock if it is commercially available. If organic seeds and planting stock are not commercially available, conventional untreated seeds and planting stock may be used. If producers use non-organic seed and planting stock, they must do so according to the standards below and provide sufficient justification.

Planting Stock: Planting stock includes: rhizomes, shoots, leaf or stem cuttings, roots or tubers. Some examples are seed potatoes, sweet potato slips, onion bulb sets, and garlic bulbs. An organic crop may be produced from non-organic, untreated planting stock if organic stock is not commercially available. Untreated planting stock may have had prohibited substances applied during production, but may not have had prohibited substances applied post-harvest.

Treated Planting Stock: Treatment (fungicide, fumigation, etc.) applied directly to mature planting stock post-harvest. Plants that have had prohibited substances applied during production are not considered treated. Any stock (whether annual or perennial) used to produce a crop within 1 year or less of planting must be untreated.

Annual Seedlings: Annual seedlings must be organic. In this instance there is no commercial availability clause. This includes vegetable transplants, onion plants, and annual flower plugs. For a list of certified organic annual seedling sources, please see our Organic Seed, Annual Seedling and Planting Stock Guide.

Perennial Plants:

- If grown as potted nursery stock, non-organic perennial plants must be grown out for 1 year before selling them as organic.
- If grown for a harvested crop, non-organic perennial stock may be used to produce an organic crop if it is not commercially available in organic form.

Documentation: When not using organic planting stock, the producer must document the reasons for not using organic planting stock and provide evidence of a search for organic planting stock prior to purchasing non-organic. This will be verified during the annual inspection. Documentation may include list of catalogs examined, record of phone calls to suppliers, and statements on invoices that an organic equivalent is not available.

Vermont Organic Farmers has verified that the sources below have not treated the planting stock listed post-harvest. Certified organic farmers can utilize these sources, though they are still responsible for retaining all receipts for their records.
